P.007/013

In re: Hargett, Jr. et al. Serial No. 10/064,718 Filed: August 9, 2002

Page 2

## Amendments to the Claims:

1. (Currently Amended) A protective composite sleeve material for a microwave reaction vessel, said sleeve material comprising:

a microwave-transparent circumferentially wound cylindrical layer of contiguous yarns fixed with a first polymer layer on the outer one surface of said wound layer; and

a chemically-inert pressure-resistant structural polymeric inner layer liner on the opposite surface of said wound layer from said first structural polymer layer.

- [2. (Cancelled)]
- [3. (Cancelled)]
- 4. (Currently Amended) A composite sleeve material according to Claim 1 and further comprising a chemically inert outer layer liner on said first structural polymer.
- 5. (Original) A composite sleeve material according to Claim 4 wherein said first structural polymer comprises a polyimide resin.
- 6. (Currently Amended) A composite sleeve material according to Claim  $\underline{1}$ comprising 5 wherein said inner and outer liners are layers formed of tetrafluorocthylene polymer.
- 7. (Currently Amended) A composite sleeve material according to Claim 4 and further comprising at least one additional textile layer and one additional structural polymer layer between said first structural polymer layer and said inert outer layer liner.

In re: Hargett, Jr. et al. Serial No. 10/064,718 Filed: August 9, 2002 Page 3

8. (Original) A composite sleeve material according to Claim 7 wherein said additional textile layer is selected from the group consisting of wound filaments, wound yarns, woven fabric, braided fabric, nonwoven fabric, and knitted fabric.

(9-12 Cancelled)

- 13. (Original) A composite sleeve according to Claim 10 further comprising a plurality of pairs of adjacent concentric layers of structural polymer and textiles between said inner and outer polymeric layers.
- 14. (Original) A composite sleeve according to Claim 13 wherein said textile layers in said pairs are selected from the group consisting of woven fabrics, braided fabrics, nonwoven fabrics, and knitted fabrics.
- 15. (Original) A composite sleeve according to Claim 13 wherein said textile layers in said pairs comprise a winding selected from the group consisting of filaments and yarns.

(16-35 Cancelled)

36. (Previously Added) A protective composite sleeve material according to Claim 1 wherein said yarns are selected from the group consisting of filament and spun yarns.

[37. Cancelled]

38. (Currently Amended) A protective composite sleeve and vessel assembly for microwave assisted chemistry, said assembly comprising:

Clyd

In re: Hargett, Jr. ct al. Serial No. 10/064,718 Filed: August 9, 2002 Page 4

a sleeve formed of a microwave-transparent circumferentially wound cylindrical layer of contiguous yarns fixed with a first polymer layer on one surface of said wound layer, and a chemically-inert pressure-resistant structural polymeric inner layer liner on the opposite surface of said wound layer from said first structural polymer layer; and

a microwave-transparent pressure resistant reaction cylinder surrounded by said sleeve.
